

HW 7.2: Comparing grayscale algorithms (green)

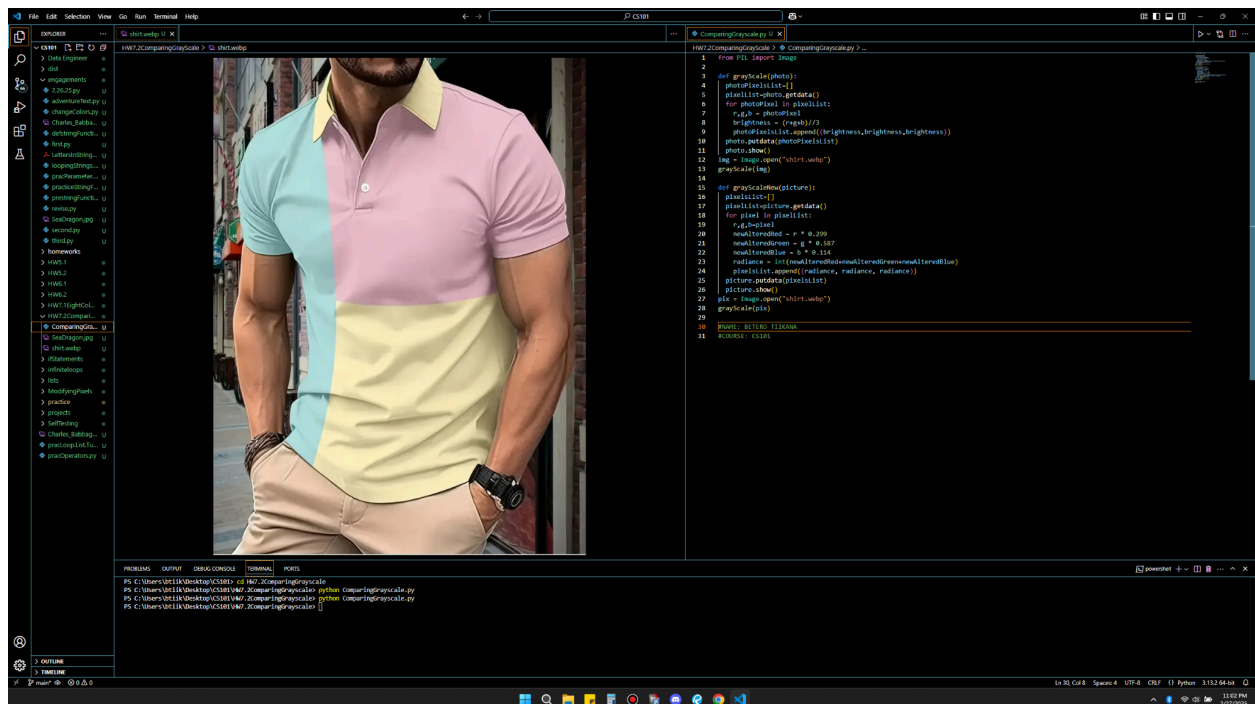

Name: Betero Tiikana

Course: CS101

Experience:

I called up my wife to the computer and I was showing her the codes I learned from class and as I finished with the codes I told her to watch carefully. Firstly, I showed her the original picture of a shirt that I was looking at on the Temu shopping website. I downloaded the picture and attached it to the definition area. I ran the program, and she was pretty surprised when the image changed to gray without even using any editor. She thought it was very cool!

Original Picture with the codes.

New Photo Results after running both of the codes.
